

Course Title: Integrative Assessment and Treatment: A DNS Perspective

Speaker: William Tortoriello, DC

Description: This lecture will attempt to outline a framework that allows practitioners to effectively and efficiently examine and treat their patients using the neuro-centric DNS perspective as its foundation. While the standard DNS model provides functional examination procedures with corrective exercise solutions, this course aims to provide a rationale for a variety of examination procedures, manual therapy techniques, and rehabilitative, functional, and performance exercise prescription.

Course Objectives:

- describe a rational assessment framework based on DNS tenets
- demonstrate how this framework provides a rationale for manual therapy
- demonstrate how this framework generates specific corrective exercise prescription
