

## CPR with Jon Hunt

"The program is designed to help students gain confidence in the identification and treatment of a Stroke, Heart Attack, and Cardiac Arrest, Naloxone administration, and choking.

Students will leave class intimately familiar with the current science of cardiac resuscitation, and how to use an AED (Automated External Defibrillator). They use only the best training mannequins with feedback sensors and a variety of AED's. The mannequins have CPR feedback devices. Frontier Safety and Supply utilize numerous live and trainer AED's for their programs.

Students learn to respond to emergencies for infants, children, and adults. Jon Hunt and the dynamic instructors with Frontier Safety and Supply are highly experienced, professional, and will keep you engaged and fully trained. These are considered General Credits towards license renewal. A CPR & BLS certificate will be awarded at the completion of the 4 hour class."
