

# Patient Care in Radiography for the CA

## Outline

---

### Modules

1. Introduction to patient care in radiology
2. Ionization and radiation
3. Methods of producing quality x-rays
4. Dark room procedures
5. Patient protection
6. Public and occupational protection

## Objectives

---

This six-hour course discusses the role of the chiropractic assistant and radiology. The course is designed to provide Chiropractic Assistants with current information on x-ray production, patient protection and procedures related to producing quality radiographs in the chiropractic office.

The learner's activities and actual course time is tracked electronically. The learner is engaged in this distance-based class by the use of interactive teaching tools.
