

Primary Spine Care 12

Case Management and Documentation

December 3 - 5, 2021

Live Webinar

Syllabus

20 CE Credit Hours

DESCRIPTION:

This program focuses on the trends in healthcare and how clinical chiropractic, based upon the evidence in the literature, fits into the national trends. It shows the doctor of chiropractic the critical role of compliant documentation in reputation building and to prevent adverse legal issues with complaint records. The course also covers the latest MRI spine interpretation terminology and identifies biomechanical pathology using the latest mensurating tools.

Friday, December 3, 2021

10:00 am – 12:00 pm

Mark Studin DC

MRI Spine Case Review

Clinical case review of MRI's including sagittal, axial, T1, T2, STIR, and proton density sequences. The vertebrate, spinal cord, discs, nerve roots, thecal sac, posterior longitudinal ligament, epidural veins, and fat saturation pulses will be identified. Pathology will include bulges, herniations, protrusions, extrusions, myelomalacia, cord edema, and Schmorl's nodes.

12:00 pm – 2 pm

Mark Studin DC

Demonstrative Documentation Reporting

Creating documentation that is demonstrable in design to show pathology visually. How to prepare demonstrable records that are legally defensible and accurate in the description of the pathology.

2:30 pm – 4:30 pm

Mark Studin DC

Don Capoferri DC

Age-Dating Herniated Disc and TRauma

Age dating herniated discs and trauma is a critical skill for an expert in spine. It combines the clinical skills of interpreting X-ray, MRI, and other imaging modalities with a clinician's understanding of joint pathology. This level of expertise is critical when collaborated with other physicians or working in the medical-legal environment as an expert. Age dating pathology is also central to creating a prognosis on your patient's recovery and must be evidence-based in rationale.

4:30 pm – 6:30 pm

Mark Studin DC

Stroke Evaluation and Risk Factors in a Chiropractic Practice

Diagnosing, triaging, and documenting headaches, migraines, and vascular incidents (stroke) in the primary provider's office. Imaging protocols based upon history and clinical presentation will be presented, along with analyzing imaging findings in determining the etiology. There will be an extensive question and answer session following the instructional presentation.

Saturday, December 4, 2021

10 am – 11 am

**Mark Studin DC, FASBE(C), DAAML, DAAPM
Don Capoferri DC**

2022 Trends in Documentation

evidence-Based demonstrative documentation is typically the arbiter for creating successful patient-centered collaborative care. This "reputation building" focus has already helped develop relationships with MD PCPs, MD Specialists, ERs, and Urgent Care Centers. This demonstratively removed the Non-Specific Back Pain "Dogma" that too many have held because technology and the evidence have not supported what chiropractic has known for over a century. We now have those tools and once learned, chiropractic utilization "skyrockets" because of the evidence.

11 am – 12:00 pm

**Michael Schonfeld DC, DABCO
Mark Studin DC**

Documentation made easy. Effectively creating demonstrative medical-legal documentation and meeting the needs of the courts, and making your "4-Corner" (narrative) report to build your reputation as an evidence-based provider. **The step-by-step minutiae of building a report,** accomplishing report writing timely and effectively by understanding the regulatory and administrative rules. Learn how to educate the lawyer on bodily injury through evidence-based demonstrative reporting.

12:15 pm – 1:45 pm

MRI Nomenclature and the Evidence of the Chiropractic Lesion

Mark Studin DC,

The latest nomenclature in MRI spine interpretation [lots of changes], and incorporating spinal biomechanics to create an accurate diagnosis and get paid. The reason medicine gets paid more than chiropractic is they have demonstrable diagnostics. We must institute protocols that WE ALREADY HAVE to confirm patho-neuro-biomechanical lesions [Subluxations] are present. A "MASTER CLASS" in Strain-Sprain in fully understanding the permanency of this connective tissue disorder and how to certify long-term care with a demonstrable diagnosis.

2:30 pm – 4:00 pm

Imaging Joint Kligamentous Instabilities

Mark Studin DC

Identifying different types of arthritis in both plain film and MRI. Inclusive of Osteo, Psoriatic, Rheumatoid, Gout, Infections, and Spondyloarthropathies. Dr. Baker is an Assistant Professor of Clinical Radiology at the State University of New York at Stony Brook, School of Medicine, and teaches the radiology and MSK radiology programs.

4:30 pm – 6:30 pm

Master-Class in Ligament Physiology and Pathology

Mark Studin DC

Don Capoferri DC

Master-Class in ligaments; anatomy, physiology, vascularization, neurological innervation, tissue repair and how they all relate to clinical practice. Ligament pathology correlating to the mechanisms of patho-neuro-biomechanical lesions (vertebral subluxation complex). Also, how ligaments play a critical role in a chiropractic spinal adjustment and defining the chiropractic spinal adjustment mechanisms.

Sunday, December 5, 2021

10 am – 11 am

Disproving Non-Specific Back Pain

Don Capoferri DC, DAAML, FSBT: Case Management incorporating Spinal Biomechanics, MRI, and clinical findings when collaborating with medical specialists and lawyers. Using Case

Management as the foundation for both consistent referrals and long-term forensic consulting relationships. Disproving based upon the evidence, the Dogma of “non-specific back pain.”

11 am – 12:00 pm

Spinal Disc Pathology in Clinical Practice

Mark Studin DC

A roundtable discussion of diagnosing spinal pathology in clinical practice. Dr. Peyster is a Harvard-trained neuroradiologist published extensively over the last 40 years. He will be presenting typical cases managed in chiropractic offices with an in-depth discussion. He will be focusing on collaborating with a radiologist on case reviews.

1:00 pm – 2:30 pm

Neurosurgical Roundtable Discussion

Mark Studin DC, FASBE(C), DAAPM, DAAML, Chiropractor

A roundtable discussion of collaborative spine care. Dr. Shady has 30 years of extensive experience in both working with and supporting chiropractic care.

1:30 pm – 3 pm

DC vs. MD vs. PT; The Evidence

Mark Studin DC, FASBE(C), DAAML, DAAPM

Don Capoferri DC

Chiropractic vs. Physical Therapy vs. medication for mechanical spine issue; extensive research verifying chiropractic as the best first choice, resolving the non-specific back pain issue as dogma, with the evidence. The latest [overwhelming] research will institute the re-direction of MD referral patterns from PTs to DCs. The latest physiological basis for why the chiropractic adjustment works and what constitutes a patho-neuro-biomechanical lesion [Subluxations].

TOTAL EDUCATIONAL TIME: 20 Hours
