

Reimbursement Guidelines and Documentation Online Syllabus

3 CE

Course Description: This program covers the standards for documentation from a coding, compliance, and licensure perspective. It focuses on case management, including the evaluation and management encounters, imaging, advanced imaging, adjunctive therapies, and direct spinal care is supported. It covers the prevention of predetermined treatment plans and all aspects of utilizing X-rays in a clinical setting. The program also details conclusively diagnosing spinal biomechanical lesions dispelling the dogma of non-specific back pain.

30 Minutes: Evaluation and Management Documentation Guidelines

60 Minutes: Clinical Findings and required documentation for upper and lower extremity spinal-related pathology

30 Minutes: Imaging and Testing necessary to correlate clinical findings

60 Minutes: Interpretation and documentation of the imaging and testing findings

Objective: To document specific spinal biomechanical lesions and conclusively document the demonstrative cause of the patient's pain.
